

## Are you **READY** for a **DOT** compliance inspection?

According to Department of Transportation Inspectors, approximately 90% of the onsite inspections result in written violations.

- Do you know what cylinders are required to be Eddy Current tested?
- Does your company have a written Eddy Current Inspection Procedure?
- How many steps do your employees take to perform a Visual Inspection on a cylinder?

In addition to the regulatory requirements, training is beneficial to your company to protect its interests by ensuring a safe work environment. I am sure you will agree, when companies risk compliance against the probability of “getting caught” it is a losing proposition for all stakeholders in our industry—I am confident you understand the consequences of risking your stellar reputation and several thousand dollars in fines by taking such a risk.

Professional Cylinder Inspectors, Inc. is the recognized provider of hands-on function specific training for high pressure cylinder inspection. We are recognized by the DOT, CGA and cylinder manufacturers as the authority on visual inspection. Step by step training is focused on novice as well as expert inspectors. Our Eddy Current course is approved by the manufacturers of both available Eddy Current Instruments. Our certification courses provide you with recognized, documented training. We have teamed up with CTC Seminars to provide training at a convenient time – the day after the CTC seminar. While the CTC course covers the hazmat training requirement, our course goes beyond the basic requirement. This full day course is a *supplement* to the CTC seminar and will provide you with additional in depth information on cylinders, cylinder handling, fill station operations and visual inspection. You may also take the Eddy Current Course which will be offered at the same time. Both courses provide a comprehensive, hands-on experience.

We will be offering a course in Las Vegas, NV on April 6, 2011 and if you'd like to sign up now, click on the link to download a registration form.

You can check for availability of future classes at a CTC Seminar at our website: [www.amybruecks.com](http://www.amybruecks.com) or email us at [amy@amybruecks.com](mailto:amy@amybruecks.com) or call Amy at (405) 239-2068 for more information.
